### **Cleansing agent concentrate for plastic injection moulding machines and extruders**

Dear Mr. Lieberum,

On basis of the documentation submitted on your cleansing agent we can inform you that it may be used for cleaning plastic injection moulding machines and extruders which are also used for the manufacture of food packaging amongst others.

After the cleaning process, however, it must be ensured by a sufficient production lead time that no residual amounts of the cleaner remain in the food packaging.

Best regards
